

ABSTRACT

The present invention is directed to a system and method for creating and editing documents or messages by dynamically loading the required data on the computing device as the documents or messages are being created or edited. This invention has relevance for creating or editing documents or messages in non-English languages using a computing device that is pre-configured to create English documents or messages, but not non-English documents or messages. Further, the present invention allows a user to create and edit documents and messages on a computing device that may not have been configured a priori or have limited storage capability to support the entire data set required for creating the documents or messages in a specific language. The computing device is required to communicate with a data storage device to dynamically load the required data from therein.
